

TurboCAD delivers the goods demanded by discerning designer and chartered builder . . .

As a designer and builder Bruce Spenser needs a top quality CAD system that can solve the complicated challenges that his work often entails. It must also be compatible with the other systems commonly used in the building industry and be totally reliable. Having used TurboCAD since the first launch of the program in the market over ten years ago, Bruce considers TurboCAD as the superior CAD package on the market.

Bruce says that as with all computer software, the package will give back in proportion to what the user is willing to put in. 2D planning is easy to pick up and use, 3D takes a little more time but with parametric doors and windows as well as a huge range of materials to choose from TurboCAD offers possibilities far beyond similar packages.

Bruce combines his building commissions with a lectureship at the College of North West London. Here TurboCAD is a vital tool in his teaching. The 3D rendering aspects can easily provide a realistic representation of the project, making variations of surface and colour simple to vary and very effective.

“ I have learnt the software since its inception and have followed and been excited by its every development - it allows me to maintain the excellence which a chartered builder strives for ”
